DETAILED ACTION

Election/Restrictions

1. A telephone call was made to Patel Rajiv on 9/21/2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

2. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-10, 17-21, 23-25 and 28-33, drawn to the structure of a communication apparatus classified in class 341, subclass 173.

Group II, claim(s) 12-16, 22, 26 and 27 drawn to a method for processing a digital communication packet based on a received pulse width of a signal, classified in class 375, subclass 238.

Art Unit: 2635

The inventions are distinct, each from the other because of the following reasons:

Inventions of groups I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the communication apparatus of group I does not necessarily require the data processing using pulse width of the subcombination of group II; it may alternatively use phase shift method. The subcombination has separate utility because the method for processing a digital communication packet using pulse width in group II can stand by itself as a separate invention or it can also be used with other types of communication apparatuses, such as digital information transmission through a wire, besides the communication apparatus of group I.

Conclusion

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and the search required for group I is not required for group II and vice versa, therefore, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

Art Unit: 2635

or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
